## EAIAPO 2021

IAPO 2021 Virtual Congress: 20– 22 January 2021

[XXIII Congreso Interamericano de Pediatría \(virtualxperiences.com\)](https://virtualxperiences.com)

XXIII Congreso Interamericano De Pediatría/XII Congreso Internacional De Otorrinolaringología De La Iapo. IAPO is a medical society created in 1995, which brings together delegates from 18 countries of the American continent

Prof Gregori participated presenting Susy Safe's activities, the data collected and the results obtained by the international project, both in Latin American countries and in other countries, with the presentation: "The Susy Safe Project and choking prevention around the world".

## WEBINAR "Foreign Body injuries in children: Italian and Chinese experience"

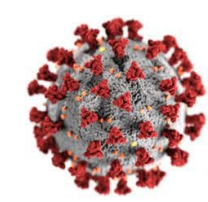

Thursday, April 15th, Italian Research Day in the World, the Embassy of Italy to the People's Republic of China, in collaboration with the National Institute of Health of the Italian Republic, the Unit of Biostatistics, Epidemiology and Public Health, Department of Cardiac, Thoracic, Vascular Sciences of the University of Padova and Prochild Onlus, organizes the international webinar which will have been attended by experts on the subject from Italy and China.

During the Webinar, researchers from the University of Padua presented the results of the Susy Safe Project to their Chinese colleagues at the Beijing Children's Hospital. The aim of the event is to involve Chinese colleagues in the international project.

## Foreign Body Covid-19 Survey

Dr. Maayan Gruber, Head of Pediatric Otolaryngology at the Galilee Medical Center in Israel and Prof Dario Gregori, Head of Unit of Biostatistics, Epidemiology and Public Health at the University of Padova in Italy developed a short survey to collect specific information on the consequences of the pandemic on cases of foreign body injury in children, in order to be able to collect useful information on the procedures used, strategies implemented and difficulties that have emerged in the last year.

Medical practice has undergone a profound upheaval: the virus has forced to change relations with patients and adopt specific procedures to reduce the frequency of contacts. Furthermore, the fear of contagion and illness has influenced, even unconsciously, our relationships with others and with the surrounding environment.

One year after the onset of the pandemic, the objective is to understand what has changed in medical practice and how difficulties were dealt with.

Data collection ended. View the questionnaire here: <https://redcap.dctv.unipd.it/surveys/?s=ALJDRY4L8L>

## The Susy Safe Project now counts with the participation of 55 countries!
